As energy costs continue to rise, we are all concerned with saving as much as we can for our pocketbook, as well as our future resources. We know that saving more energy helps our environment and our planet. Now, imagine if you could buy windows and doors that could help you save more energy. With Envirosealed Windows™ and Doors, you can. The Envirosealed logo symbolizes products that contain the most energy-efficient components available.

SAVE ON ENERGY.

An average home will lose between 10 percent and 25 percent of its energy through windows and doors. The best windows and doors can save up to 15 percent on your heating and cooling energy bills. Did you know that your energy savings can also help to protect the environment? Every kilowatt of energy we use to heat and cool our homes can result in up to 2 lbs of CO₂ being created. With Envirosealed Windows™ and Doors, you are doing your part to conserve energy and protect our planet.

IMPROVE EFFICIENCY.

Did you know that the Duralite® spacer inside your window's insulating glass unit can improve the energy efficiency of that window by as much as 10 percent? That is a lot of energy savings for such a small component. In addition to saving energy, which also reduces how much you spend to heat and cool your home, Duralite can also reduce condensation on the glass. Less condensation and reduced energy costs mean a healthy, more comfortable home.

The Duralite® spacer is a component laminate design that optimizes the use of a number of spacer components. All spacers need adhesives, sealants, structural elements and dessicant to perform. They also need to last a long time under adverse conditions inside your window frame. Duralite is designed to seal your window better and longer, while increasing energy savings compared to other types of spacers.

ENHANCE COMFORT.

When it comes to windows, you have many choices in colors, interior finishes, hardware and glass. Most glass options also have a variety of different spacer choices that can make a real difference in performance and comfort. The warmer the glass edge, the less energy lost and the more comfortable you feel near your window. That's why it's called warm edge. Look for Duralite® in your Envirosealed Windows™ and Doors for better performance.

EVOLVE WITH ENERGY STAR®.

Today, you are probably looking for an ENERGY STAR® label when you shop for appliances, windows and doors. Did you know the ENERGY STAR rating has recently changed to make those labeled products more energy efficient? It is also scheduled to change again in 2013, most likely, with even more energy-efficiency requirements. If you want to save energy, look for the lowest possible U-Factor and energy-efficient glass and spacer options – such as Duralite® – in your next window purchase.
